## CONTENTS

S1 TREE CROWN CONDITION AND DAMAGE CAUSES - ADDITIONAL TABLES AND MAPS ..... 4
S1-1 Mean plot defoliation of main tree species in 2022 ..... 4
S1-2 Trends in mean plot defoliation of the main tree species 2013-2022 ..... 13
S1-3 Damage from various damaging agent groups reported in 2022 ..... 21
S2RESULTS OF THE NATIONAL CROWN CONDITION SURVEYS ..... 27
S2-1 Information on the monitoring design for the national crown condition surveys in the participating countries in 2022. ..... 27
S2-2 Tree defoliation (\%) in different defoliation classes from national crown condition surveys in 2022 ..... 28
S2-3 Percentage of moderately to severely defoliated trees (defoliation classes 2-4) between 2013 and 2022 - All species ..... 32
S2-4 Percentage of moderately to severely defoliated trees (defoliation classes 2-4) between 2013 and 2022 - Conifers. ..... 33
S2-5 Percentage of moderately to severely defoliated trees (defoliation classes 2-4) between 2013 and 2022 - Broadleaves ..... 34
S2-6 Change of tree defoliation over time (1990-2022) per country ..... 35

## S1 TREE CROWN CONDITION AND DAMAGE CAUSES - ADDITIONAL TABLES AND MAPS

## S1-1 Mean plot defoliation of main tree species in 2022

Table S1-1: Percentage of plots with mean plot defoliation in defoliation classes 0-3 (class 2 subdivided) for the main species or species groups ( $n$ trees pr. plot $\geqslant 3$ ) and the number of plots in each group in 2022. Dead trees are not included.

|  | Class 0 <br> $0-10 \%$ | Class 1 <br> $>10-25 \%$ | Class 2-1 <br> $>25-40 \%$ | Class 2-2 <br> $>40-60 \%$ | Class 3 <br> $>60 \%$ | No. of <br> plots |
| :--- | ---: | ---: | ---: | ---: | ---: | ---: |
| Main species or species groups | 15.4 | 61.6 | 16.9 | 5.3 | 0.8 | 1163 |
| Scots pine (Pinus sylvestris) | 21.5 | 40.3 | 28.6 | 8.9 | 0.6 | 873 |
| Norway spruce (Picea abies) | 12.1 | 58.2 | 18.3 | 9.3 | 2.1 | 289 |
| Austrian pine (Pinus nigra) | 3.5 | 65.1 | 25.2 | 5.2 | 1.0 | 401 |
| Mediterranean lowland pines | 20.6 | 41.3 | 27.6 | 7.8 | 2.8 | 715 |
| Common beech (Fagus sylvatica) | 8.3 | 42.1 | 33.3 | 13.3 | 3.1 | 649 |
| Deciduous temperate oaks | 12.6 | 49.5 | 24.1 | 11.4 | 2.4 | 493 |
| Dec. (sub-) Mediterranean oaks | 2.0 | 42.5 | 42.1 | 12.1 | 1.2 | 247 |
| Evergreen oaks |  |  |  |  |  |  |

Figure S1-1: Mean plot defoliation of Scots pine (Pinus sylvestris ) in 2022. Dead trees are not included. The legend (top left) indicates the degree of defoliation (defoliation class) ranging from none (blue), slight (green), moderate (orange and red), to severe (black). The percentages refer to the needle/leaf loss in the crown compared to a reference tree. The pie chart (top right) indicates the percentage of plots per defoliation class.

Figure S1-2: Mean plot defoliation of Norway spruce (Picea abies) in 2022. Dead trees are not included. The legend (top left) indicates the degree of defoliation (defoliation class) ranging from none (blue), slight (green), moderate (orange and red), to severe (black). The percentages refer to the needle/leaf loss in the crown compared to a reference tree. The pie chart (top right) indicates the percentage of plots per defoliation class.

Figure S1-3: Mean plot defoliation of Austrian pine (Pinus nigra ) in 2022. Dead trees are not included. The legend (top left) indicates the degree of defoliation (defoliation class) ranging from none (blue), slight (green), moderate (orange and red), to severe (black). The percentages refer to the needle/leaf loss in the crown compared to a reference tree. The pie chart (top right) indicates the percentage of plots per defoliation class.

Figure S1-4: Mean plot defoliation of Mediterranean lowland pines (Pinus halepensis, P. pinaster, P. pinea, P. brutia) in 2022. Dead trees are not included. The legend (top left) indicates the degree of defoliation (defoliation class) ranging from none (blue), slight (green), moderate (orange and red), to severe (black). The percentages refer to the needle/leaf loss in the crown compared to a reference tree. The pie chart (top right) indicates the percentage of plots per defoliation class.

Figure S1-5: Mean plot defoliation of common beech (Fagus sylvatica) in 2022. Dead trees are not included. The legend (top left) indicates the degree of defoliation (defoliation class) ranging from none (blue), slight (green), moderate (orange and red), to severe (black). The percentages refer to the needle/leaf loss in the crown compared to a reference tree. The pie chart (top right) indicates the percentage of plots per defoliation class.

Figure S1-6: Mean plot defoliation of deciduous temperate oaks (Quercus robur and Q. petraea) in 2022. Dead trees are not included. The legend (top left) indicates the degree of defoliation (defoliation class) ranging from none (blue), slight (green), moderate (orange and red), to severe (black). The percentages refer to the needle/leaf loss in the crown compared to a reference tree. The pie chart (top right) indicates the percentage of plots per defoliation class.

Figure S1-7: Mean plot defoliation of deciduous (sub-) Mediterranean oaks (Quercus cerris, Q. frainetto, Q. pubescens, Q. pyrenaica) in 2022. Dead trees are not included. The legend (top left) indicates the degree of defoliation (defoliation class) ranging from none (blue), slight (green), moderate (orange and red), to severe (black). The percentages refer to the needle/leaf loss in the crown compared to a reference tree. The pie chart (top right) indicates the percentage of plots per defoliation class.

Figure S1-8: Mean plot defoliation of evergreen oaks (Quercus coccifera, Q. ilex, Q. rotundifolia, Q. suber) in 2022. Dead trees are not included. The legend (top left) indicates the degree of defoliation (defoliation class) ranging from none (blue), slight (green), moderate (orange and red), to severe (black). The percentages refer to the needle/leaf loss in the crown compared to a reference tree. The pie chart (top right) indicates the percentage of plots per defoliation class.

## S1-2 Trends in mean plot defoliation of the main tree species 2013-2022

Figure S1-9: Trends in mean plot defoliation of Scots pine (Pinus sylvestris ) between 2013 and 2022. Plots were included if assessments were available for at least $80 \%$ of the period. The legend (top left) indicates whether mean plot defoliation overall decreased, stayed the same or increased within the given period. The pie chart (top right) indicates the respective percentage of plots per trend direction.

Figure S1-10: Trends in mean plot defoliation of Norway spruce (Picea abies) between 2013 and 2022. Plots were included if assessments were available for at least $80 \%$ of the period. The legend (top left) indicates whether mean plot defoliation overall decreased, stayed the same or increased within the given period. The pie chart (top right) indicates the respective percentage of plots per trend direction.

Figure S1-11: Trends in mean plot defoliation of Austrian pine (Pinus nigra) between 2013 and 2022. Plots were included if assessments were available for at least $80 \%$ of the period. The legend (top left) indicates whether mean plot defoliation overall decreased, stayed the same or increased within the given period. The pie chart (top right) indicates the respective percentage of plots per trend direction.

Figure S1-12: Trends in mean plot defoliation of Mediterranean lowland pines (Pinus brutia, P. halepensis, P. pinaster, P. pinea) between 2013 and 2022. Plots were included if assessments were available for at least $80 \%$ of the period. The legend (top left) indicates whether mean plot defoliation overall decreased, stayed the same or increased within the given period. The pie chart (top right) indicates the respective percentage of plots per trend direction.

Figure S1-13: Trends in mean plot defoliation of common beech (Fagus sylvatica) between 2013 and 2022. Plots were included if assessments were available for at least $80 \%$ of the period. The legend (top left) indicates whether mean plot defoliation overall decreased, stayed the same or increased within the given period. The pie chart (top right) indicates the respective percentage of plots per trend direction.

Figure S1-14: Trends in mean plot defoliation of deciduous temperate oaks (Quercus robur and Q. petraea) between 2013 and 2022. Plots were included if assessments were available for at least $80 \%$ of the period. The legend (top left) indicates whether mean plot defoliation overall decreased, stayed the same or increased within the given period. The pie chart (top right) indicates the respective percentage of plots per trend direction.

Figure S1-15: Trends in mean plot defoliation of deciduous (sub-) Mediterranean oaks (Quercus cerris, Q. frainetto, Q. pubescens, Q. pyrenaica) between 2013 and 2022. Plots were included if assessments were available for at least $80 \%$ of the period. The legend (top left) indicates whether mean plot defoliation overall decreased, stayed the same or increased within the given period. The pie chart (top right) indicates the respective percentage of plots per trend direction.

Figure S1-16: Trends in mean plot defoliation of evergreen oaks (Quercus coccifera, Q ilex, Q. rotundifolia, Q. suber) between 2013 and 2022. Plots were included if assessments were available for at least $80 \%$ of the period. The legend (top left) indicates whether mean plot defoliation overall decreased, stayed the same or increased within the given period. The pie chart (top right) indicates the respective percentage of plots per trend direction.

## S1-3 Damage from various damaging agent groups reported in 2022

Figure S1-17: Damage from agent group Abiotic factors reported in 2022. Both fresh and old damage is shown.

Figure S1-18: Damage from agent group Direct action of man reported in 2022. Both fresh and old damage is shown.

Figure S1-19: Damage from agent group Fire reported in 2022. Both fresh and old damage is shown.

Figure S1-20: Damage from agent group Fungi reported in 2022. Both fresh and old damage is shown.

Figure S1-21: Damage from agent group Game and grazing reported in 2022. Both fresh and old damage is shown.

Figure S1-22: Damage from agent group Insects reported in 2022. Both fresh and old damage is shown.

## S2 RESULTS OF THE NATIONAL CROWN CONDITION SURVEYS

S2-1 Information on the monitoring design for the national crown condition surveys in the participating countries in 2022

| Country | Total area $\text { ( } 1000 \mathrm{ha} \text { ) }$ | Forest area (1000 ha) | Grid size (km x km) | No. of sample plots | No. of sample trees |
| :---: | :---: | :---: | :---: | :---: | :---: |
| Albania | No information available for 2022 |  |  |  |  |
| Andorra | 47 | 18 | $4 \times 4$ | 12 | 290 |
| Belarus | No information available for 2022 |  |  |  |  |

Please note that some differences in the level of defoliation between participating countries may be at least partly due to differences in standards used. This restriction, however, does not affect the reliability of the trends over time. In some countries there has been a change in the monitoring design at different points in time.

| Ukraine | 7.0 | 5.5 | 6.3 |  |  |  |  |  |  |  | N/A |

Please note that some differences in the level of defoliation between participating countries may be at least partly due to differences in standards used. This restriction, however, does not affect the reliability of the trends over time. In some countries there has been a change in the monitoring design at different points in time.

## S2-6 Change of tree defoliation over time (1990-2022) per country

Please note that some countries have changed their monitoring design at different points in time which may explain sudden strong increases or decreases in the number of trees per defoliation category in the figures below. For detailed information, please contact the respective NFCs. Their contact information is given in the Annex of the ICP Forests 2023 Technical Report ${ }^{1}$.
