

PROJECT INFORMATION

Project title: Monitoring ash dieback with ICP Forests Level I survey data

Project ID: 220 (Follow-up No 180)

Contact person: Jan Peter George // jan.peter.george@ut.ee

PROJECT DESCRIPTION

ICP Forests Level I data will be used in order to map the ash dieback pandemic across Europe since its beginning. Mortality rates will be calculated in a Cox-Hazard model and site as well as single tree information will be included as explanatory variables. Our obtained model will inform about recent hotspots of ash mortality and will also forecast future mortality dynamics.
